

# Battery Acid Spill Kit

Battery acid is a hazardous material and should be handled carefully. A thorough risk assessment should be completed before using this kit and only trained and protected staff should be involved in clean up.

1. Protect yourself: Wear appropriate PPE as specified in your risk assessment.
2. Ventilate the area: Ensure adequate ventilation to reduce the risk of inhaling harmful fumes, open windows and doors, use mechanical ventilation if required.
3. Stop the spill: If you can safely prevent any more liquid from spilling you should do so.
4. Contain the liquid: Use the socks and mats to stop the liquid from spreading.
5. Neutralise the acid: Apply VYTAC ACX to the spill slowly while mixing, working from the outside (the inside of any spill containment in place) to the centre. The mixture will first appear yellow/orange. The mixture will turn red when sufficient ACX has been applied to completely neutralize the spill. NOTE. For concentrated acid spills consider diluting with water.
6. Clean up: Use the mats and a brush to clear away the neutralised materials.
7. Rinse and clean: Rinse the area down with water to ensure all residues are removed.
8. Disposal: Use the waste bags to dispose of the waste as per your local regulations.
9. Decontaminate or dispose of PPE: Ensure PPE is adequately decontaminated or disposed of safely.
10. Report and Restock: Report the spillage as per your company policies and restock the spill kit to the specification overleaf.

These are guidelines only and Spillcraft cannot be held responsible for use of this kit.

# Battery Acid Spill Kit

PPE requirements are the responsibility of the employer and a risk assessment should be completed to determine the suitable protective equipment required for the task at hand.

## Contents

- 60 x Chemical absorbent spill mats
- 4 x 1.2m Chemical absorbent socks
- 1 x ChemMax1 coverall suit XL
- 2 x Waste bags and ties
- 1 x Spill kit PPE pack
- 1 x VYTAC ACX Neutralising Powder
- 1 x Dustpan and brush set
